Typical Sensor Applications

ES

Widely used for both industrial and marine applications, the ES is a sensor offered in a range of materials which include Mild Steel, Brass, Stainless Steel (316). The sensor has a 3/4" BSP female coupling for easy installation to the storage vessel.

SM

As with ES the SM is used for both industrial and marine applications and can also be manufactured from the same range of materials. The SM sensor has been designed for the measurement of highly viscous liquids that would tend to congeal within the chamber of an enclosed type sensor.

IS and IS (T)

The IS and IS (T) are internal sensors for industrial and marine uses. Materials of construction are as used for types ES/SM. These sensors are ideal for use on tanks where the only access is via manhole covers.
